BRIAN KENNEDY

Python & Go Backend Developer

Nairobi, Kenya

0705984412 | scxbrian@gmail.com | linkedin.com/in/brian-kennedy | github.com/scxbrian

Professional Summary

Dedicated Backend Developer with a primary focus on Python and an expanding skill set in Go, possessing a strong preference for server-side logic, API design, and data architecture over frontend development. Currently mapping out backend requirements for scalable SaaS solutions. Seeking a backend engineering role to contribute a rigorous problem-solving mindset, a drive for technical excellence, and a commitment to writing clean, foundational code to a professional engineering team.

Technical Skills

- **Backend Development:** Python (Core), Go, RESTful API Concepts
- **General Programming:** Git/GitHub, Terminal/Command Line basics, Debugging, Logic & Problem Solving
- **Web Technologies & Databases:** JavaScript, MERN Stack (MongoDB, Express, React, Node), Relational Databases

Experience & Entrepreneurship

Backend Architecture Lead | Independent SaaS Development *Nairobi, Kenya* | *Oct 2025 – Present*

- Bootstrapping software startup concepts and SaaS products, including FlowSignal (a SaaS analytics platform for content creators) and BomaShop.
- Designing core backend logic, database schemas, and data flow requirements for native implementation in Python and Go.
- Executing comprehensive system planning, user requirement gathering, and architectural mapping to establish scalable foundations prior to writing production code.

Projects & Continuous Development

Backend Foundation Initiative | Self-Directed Focus

- Transitioning strategically from framework-heavy full-stack development to pure backend engineering.

- Building fundamental command-line applications and streamlined APIs in Python to solidify core programming logic independently of heavy frameworks or generative AI tools.
- Working with Go's syntax, formatting (`fmt`), and execution models to leverage compiled languages for optimal backend performance.

Education

Certificate in Software Development | Power Learn Project (PLP) *Graduated Dec 2025*

- Completed an intensive, comprehensive software engineering program focusing on core development principles, web technologies, and the broader tech ecosystem.

Certificate in Software Development | Power Learn Project (PLP)
Graduated Dec 2025

Completed an intensive, comprehensive software engineering program focusing on core development principles, web technologies, and the broader tech ecosystem.
